## Steketee IC Light

### £POA

The IC-Light steering system allows steering and guiding various machines in row crop cultures in a simple, economical and effective way. Sowing machines, field crop sprayers, weeding machines, etc., can be steered with great precision, being within a tolerance of approx. 3 cm and driving speeds of 4 to 12 km/h. IC-Light's steering system automatically corrects every change in course of the tractor against the crop row.
